This action is in response to applicants' amendment of 12 November 2003. The 35 USC 112, second paragraph rejections are withdrawn due to the amendments to the claims. The objections to the specification, abstract and drawings are withdrawn due to the amendments to the specification, abstract and figure 1. Applicant's arguments with respect to the remaining rejections have been fully considered but they are not persuasive.

Claim 21 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention.

Claim 21 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for producing a phosphor with a titanate host matrix having a perovskite structure which include sulfur, an alkaline earth metal and a rare earth metal where the sulfur atoms partially substitute for oxygen does not reasonably provide enablement for a phosphor with a host matrix having a perovskite structure which include sulfur, an alkaline earth metal and a rare earth metal where the sulfur atoms partially substitute for oxygen. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims.

The specification only teaches a phosphor with a titanate host matrix having a perovskite structure which include sulfur, an alkaline earth metal and a rare earth metal. There is no other host matrix taught in the specification and there is no teaching or suggestion in the art to indicate that other alkaline earth and rare earth containing perovskites will be phosphorescent when sulfur partially substitutes for oxygen.

Applicants have argued that the statement on page 7 provides support and enablement for the production of all phosphors having a host having a perovskite structure, which includes sulfur, an alkaline earth metal and a rare earth metal. This statement simply states the invention teaches a phosphor containing S, is free of cadmium, and has good properties when compared to SrTiO_3 type phosphor. This statement does not support the claimed non-titanate based phosphors nor does it enable one of ordinary skill to produce the claimed phosphor when the host is not a titanate. $\text{CaSnO}_3\text{:Tb}$ and $\text{AHfO}_2\text{:Ce}$, where A is at least one alkaline earth metal, are phosphors with a host having a perovskite structure and which includes an alkaline earth metal and a rare earth metal. These phosphors have different lifespan characteristics than SrTiO_3 type phosphors. The claim includes sulfur containing versions of these phosphors, but by applicants' own arguments, they are excluded by the statement on page 7. Clearly the specification does not support nor enable all the phosphor compositions encompassed by the claim. The rejections are maintained.

Claims 1-20, 22 and 23 are allowable for the reasons given in the previous action.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
